ENGINEER'S REPORT

REGARDING WASTEWATER ISSUES
June 7, 2017

General

Annual Television Inspection

- We are working with Township staff to coordinate the repairs to the two (2) leaking manholes discovered within the easement from Country Run to the wastewater treatment plant, and the manholes on Derry Drive that exhibited some deterioration in the concrete channels.

East Side Sewer District

– Final Treatment Tank @ WWTP

- We are coordinating with DELCORA regarding any outstanding items they may have. We anticipate finalizing the punch lists for each of the contracts and issuing them next week.

– Dallet (Phase V)/ Preserve @ Squire Cheyney Farm

- Per the May 18, 2017 request from the developer's attorney, the final releases for the financial security being held for each phase of this project are being processed for the Township's consideration. Also, please note as of June 1st, the Township assumed responsibility for the pump station at the Preserve @ Squire Cheyney. DELCORA will operate and maintain this station under their current contract with the Township.

– Mill Creek Subdivision

- We are working with the developer to resolve the remaining outstanding issues associated with the punch list.

– Thornton Road Planning Module

- We are proceeding with the planning module application to DEP for the installation of a low pressure sewer main on Thornton Road in the vicinity of Thornbury Park. The intent of the application is to receive approval for the new development @ 420 Thornton Road (Culp), in addition to enough of the existing properties surrounding the development to permit additional connections without having to receive further 537 Planning approval.
