ENGINEER'S REPORT

REGARDING WASTEWATER ISSUES
September 6, 2017

General

Annual Television Inspection

- We are working with Township staff to coordinate the repairs to the two (2) leaking manholes discovered within the easement from Country Run to the wastewater treatment plant, and the manholes on Derry Drive that exhibited some deterioration in the concrete channels.

East Side Sewer District

– Final Treatment Tank @ WWTP

- All punch list items have been addressed by the General contractor, and all final closeout documents have been received. Therefore we are recommending release of final payment for them. The Electrical contractor however still has not addressed the outstanding punch list items. Although none of these items affect the daily operation of the system, we have again informed the contractor the work needs to be completed as soon as possible, and no later than the end of September.

– Aeration Tank No 3 @ WWTP

- We received several prices from local contractors to pressure wash the interior of this tank. The lowest price was from Franc Environmental at a cost of $3,300 plus $0.25/gallon for disposal of the residual material produced. The work is scheduled for Thursday August 31ST.

– Thornton Road Low Pressure Sewer

- The advertisement for the planning module was published in the Delaware County Daily Times on August 21st. The required 30-day public comment period will expire on Tuesday September 19th. This will enable the Board to consider a Resolution adopting the revision at their public meeting on Wednesday September 20th. In addition, the Township Planning Commission will consider the application at their September 13th meeting.

West Side Sewer District

– Mill Creek Subdivision

- We received revised as-built plans on August 24Th. We are currently in the process of reviewing them to determine if all our previous comments have been adequately addressed.
