ENGINEER'S REPORT

REGARDING WASTEWATER ISSUES
November 15, 2017

East Side Sewer District

– Chemical Storage Tank @ WWTP

- The 1025 gallon tank housing the chemical required for phosphorus removal has developed a leak. The leak at this time is relatively minor, contained and does not present a hazard. The issue however will have to be addressed in the near future. We will work with Township staff and DELCORA to determine the most practical and cost effective solution.

– Thornton Road Low Pressure Sewer

- Planning approval from DEP for the extension was received on November 2nd. A preliminary plan has also been completed and forwarded to the Township and Sewer Committee for comments. We are also working with Township staff to look at potential modifications that might make the installation a little more cost effective for all parties.

West Side Sewer District

– Mill Creek Subdivision

- At this time, all construction related items contained in our punch list dated 10/1/13 have been addressed. The outstanding issues consist solely of revisions to the as-built plans to accurately reflect the as-constructed conditions. The most significant of these issues is the new easement required on the Dever property where the location of the sewer main was revised by the developer.
