ENGINEER'S REPORT

REGARDING WASTEWATER ISSUES
December 6, 2017

East Side Sewer District

– Chemical Storage Tank @ WWTP

- The 1025 gallon tank housing the chemical required for phosphorus removal has developed a leak. The leak at this time is relatively minor, contained and does not present a hazard. The issue however will have to be addressed in the near future. We will work with Township staff and DELCORA to determine the most practical and cost effective solution.

– Thornton Road Low Pressure Sewer

- We are continuing to work with Township staff and the developers to finalize the design in an effort to make the installation as cost effective as possible for all property owners along the route.

– Black Bell Farm Development

- We attended a pre-construction meeting with the Developer and Township staff on Monday November 20th. The developer indicated they intend on commencing with construction within a few weeks. The installation of the sanitary sewer system will likely not commence until January of 2018 at the earliest.

West Side Sewer District

– Mill Creek Subdivision

- Revised as-built plans were received November 27th. We are in the process of reviewing them to determine of all of our previous comments have been adequately addressed.
