Another Skunk Reported to Have Rabies

Watertown, NY ~October 1, 2018~ The New York State Department of Health laboratory has reported to the Jefferson County Public Health Service (JCPS) that a skunk has tested positive for rabies. This skunk was located in the Town of Rodman off Whitford Road. Two dogs were exposed. One dog was not vaccinated and will be quarantined for 6 months while the second dog will receive a booster vaccine.

Rabies is a fatal disease that attacks the brain and spinal cord. It can take several weeks to several months for rabies symptoms to appear. Early treatment after an exposure can prevent rabies in humans and in pets who are up to date on vaccination. Any mammal can get rabies, but it is most often seen in bats, raccoons, skunks, and foxes. Animals with rabies may be aggressive, sick or unusually friendly. Please take these steps to help prevent the spread of rabies:

1. Teach children to stay away from unfamiliar animals, either wild or domestic, even if they appear friendly. Remind them to tell you if they have any unusual contact with an animal.
2. Do not feed stray or wild animals. This attracts them to your home increasing the risk of transmission of disease to people and pets.
3. **Do not leave pet food outside as it attracts wildlife to your home.**
4. Wash any wound from an animal encounter thoroughly with soap and water and seek medical attention immediately.
5. Be a responsible pet owner by keeping your pet's vaccinations current. Getting your pet vaccinated by your vet or at a clinic can help stop the spread of rabies from wild animals to humans. **A rabies vaccination clinic will be held on October 18th 5-7pm at Jefferson County Dog Control. For more information and directions, follow us at [facebook/jcphs](https://www.facebook.com/jcphs) or online at jcphs.org.**
6. Monitor your pet when they are outside. If your pet is involved in an altercation with a wild animal, do not get in between them. Do not touch your pet without gloves as rabies is spread through saliva. Cover your pet with a towel and contact your vet as your pet may need a booster shot.
