

## KPU Electric Division Conservation Tip #2

# **Performing an Energy Audit on Your Home Can Save You Money!!!**

The first step to taking a whole house energy efficiency approach is to find out which parts of your house use the most energy. A home energy audit will pinpoint those areas and suggest the most effective measures for cutting your energy costs. A good home energy audit will help you evaluate your home's insulation levels, air leaks, the condition of your windows and doors, your heating system, lighting, and your appliance usage.
