Clay Street Realignment and Bridge Replacement Project

Initial Site Assessment (ISA)

Clay Street Realignment and Bridge Replacement Project
Clay Street over Hangtown Creek
El Dorado County
BRCMLO-5015(011)

April 13th, 2016

The City of Placerville Engineering Division (City) is proposing to replace the Clay Street Bridge (project) realign Clay Street to create a new 4-leg intersection with Main Street and Cedar Ravine Road., as determined by the Federal Highway Administration (FHWA) criteria. The project site is located in the City of Placerville, in the eastern central portion of El Dorado County, where Clay Street crosses Hangtown Creek, south of U.S Route 50 and includes the Clay Street Bridge, portions of Main Street, Cedar Ravine Road, Thompson Way, Pacific Street, Locust Avenue, and a section of the El Dorado Trail. The Clay Street Bridge over Hangtown Creek is a reinforced concrete, filled spandrel arch bridge that was originally constructed in 1940 as stated in the Caltrans Bridge Inspection Report. The bridge has two spans with a total length of approximately 33 feet. The bridge is a single lane bridge, 19 feet wide, which carries two lanes of traffic in both the northbound and southbound direction across Hangtown Creek.

The property assessed for this Initial Site Assessment (ISA) includes the area adjacent to the existing bridge and roadway, and is referred to as the "project area" or the "project site" in this report. Adjacent land use consists of the El Dorado Trail and medium- to high-density residential and commercial development. According to review of historical sources, including historical aerial photographs and topographic maps, the first development of the project site occurred prior to 1935.

This ISA identifies Recognized Environmental Conditions (RECs) for the project site that may adversely affect roadway and/or bridge construction or right-of-way acquisition. An REC is defined by the American Society for Testing and Materials (ASTM) Practice E 1527-05 as: "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment."

This ISA was conducted in general conformance with the scope and limitations of the ASTM Practice E 1527-05. This ISA includes a summary of the site reconnaissance conducted on December 3, 2015, a review of environmental databases, and a review of historical data sources. Any exceptions to or deletions from these ASTM practices are described later in this report.

A database report was obtained from Environmental Database Resources, Inc. (EDR) consisting of information compiled from various government records, such as Geotracker, National Priorities List and solid waste information system, for information regarding the project area. The following potential environmental issues within the project area and surrounding properties were also discussed:

- Impacts associated with the presence of lead-based paint (LBP) and/or asbestos containing materials (ACMs) due to the age of the existing bridge and roadway;
- the presence of petroleum hydrocarbons from former and current business operations including gasoline underground storage tanks at former gasoline service stations; and
- the presence of abandoned USTs.

APPENDIX C. ISA CHECKLIST

INTRODUCTION

Purpose and Involved Parties

This Initial Site Assessment (ISA) has been prepared on behalf of the City of Placerville Engineering Division (City) for approval from the California Department of Transportation (Caltrans) on behalf of the Federal Highway Administration (FHWA).

This ISA documents the evaluation of the project area for indications of "Recognized Environmental Conditions." An REC is defined by the ASTM Practice E 1527-05 as: "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment." The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of regulatory governmental agencies. Conditions determined to be *de minimis* are not considered to be RECs.

Regulatory Setting

Hazardous materials, including hazardous substances and wastes are regulated by many state and federal laws. Statutes govern the generation, treatment, storage and disposal of hazardous materials, substances, and waste, and also the investigation and mitigation of waste releases, air and water quality, human health and land use.

The primary federal laws regulating hazardous wastes/materials are the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA) and the Resource Conservation and Recovery Act of 1976 (RCRA). The purpose of CERCLA, often referred to as "Superfund," is to identify and clean up abandoned contaminated sites so that public health and welfare are not compromised. RCRA provides for "cradle to grave" regulation of hazardous waste generated by operating entities. Other federal laws include:

- Community Environmental Response Facilitation Act (CERFA) of 1992
- Clean Water Act
- Clean Air Act
- Safe Drinking Water Act
- Occupational Safety and Health Act (OSHA)
- Atomic Energy Act
- Toxic Substances Control Act (TSCA)
- Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA)

In addition to the acts listed above, Executive Order (EO) 12088, Federal Compliance with Pollution Control Standards, mandates that necessary actions be taken to prevent and control environmental pollution when federal activities or federal facilities are involved.

California regulates hazardous materials, waste, and substances under the authority of the California Health and Safety Code and is also authorized by the federal government to implement RCRA in the state. California law also addresses specific handling, storage, transportation, disposal, treatment, reduction, cleanup and emergency planning of hazardous waste. The Porter-Cologne Water Quality Control Act also restricts disposal of wastes and requires clean-up of wastes that are below hazardous waste concentrations but could impact ground and surface water quality. California regulations that address waste management and prevention and clean up contamination include Title 22 Division 4.5 Environmental Health Standards for the Management of Hazardous Waste, Title 23 Waters, and Title 27 Environmental Protection.

Worker and public health and safety are key issues when addressing hazardous materials that may affect human health and the environment. Proper management and disposal of hazardous material is vital if it is encountered, disturbed during, or generated during project construction.

Scope of Service, Significant Assumptions, and Limitations

The services provided for this project consisted of the following:

- A description of the project area including current land uses;
- A general description of the topography, soils, geology, and groundwater flow direction;
- A review of regulatory information published by federal, state, local, tribal, health, and/or environmental agencies pertaining to the project area;
- A review of historical data sources for the project area, including aerial photographs, topographic maps, fire insurance maps, city directories, and other readily available development data;
- An area reconnaissance and an environmental review—including a visual inspection of adjoining properties—with a focus on indications of hazardous substances, petroleum products, wells, storage tanks, solid waste disposal pits and sumps, and utilities; and
- Preparation of this report of methods, findings, and conclusions.

The goal of this ISA is to identify conditions in the project area that may indicate risks regarding hazardous materials storage, disposal, or other impacts. The resulting report may qualify the user for relief from liabilities per CERCLA Section 9607 (All Appropriate Inquiry [AAI] subsections) and satisfy one of the requirements as innocent landowners, contiguous property owner, or bona fide prospective purchaser.

Federal regulations at 40 Code of Federal Regulations [C.F.R.] Part 312, promulgated by the United States (U.S.) Environmental Protection Agency (EPA), require that liability release be based (in part) on completion of AAI prior to purchase of a property.

Those inquiries are documented by Phase I reports, or ISAs/Environmental Site Assessments (ESAs). EPA has agreed that the recently developed ASTM guidance (ASTM Practice E 1527- 05) specifies and interprets AAI requirements.

A user is defined by ASTM Practice E 1527-05 as the party seeking to use Practice E 1527 to complete an ISA of the project area and may include a potential purchaser of land in the project area, a potential tenant of the project area, an owner of land in the project area, a lender, or a project area manager. This report was prepared for City of Placerville Engineering Division. Investigative areas not included in the standard ASTM ISA scope include: asbestos, lead based paint (LBP), lead in drinking water, radon or

urea formaldehyde, wetland issues, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, and high voltage power lines. Additionally, the scope of services for a standard ISA does not include the completion of soil borings, the installation of groundwater monitoring wells, or the collection of soil or groundwater samples. Likely sources of vapor intrusion, from potential on-site or off-site sources, are identified. State and national policies and standards relevant to vapor intrusion are in flux and subject to change.

Per Caltrans site investigation guidance, Caltrans has a process for evaluating asbestos and lead within a project site, and separate guidance documents provide the methodology and technologies for these specific site investigations. Although asbestos and lead may be present, these issues would be addressed by the City under separate assessment(s). An REC, as defined by ASTM, would not include asbestos and LBP, as these are typical construction waste management issues.

The following assumptions were made in preparing the scope of this assessment:

- Data gathered from public information sources (i.e., libraries or public regulatory agencies) are accurate and reliable.
- Site operations reflect site conditions relative to potential releases and no intentional concealment of environmental conditions or releases has occurred.
- Published geologic information and site observations made by the environmental professional
 are used to estimate likely contaminant migration pathways in the subsurface. These estimates
 by the environmental professional are limited in accuracy and are generally cross-referenced
 with existing information about similar sites and environmental releases in the area.
- Regulatory information is limited to sites discovered after the late 1980s because reliable records were not kept by regulatory agencies prior to that time.
- Where an REC has resulted from a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls, the term "historical REC" is used.

The findings and conclusions presented in this report are based on the procedures described in ASTM Practice E 1527-05, informal discussions with various agencies, a review of the available literature cited in this report, and conditions noted at the time of this ISA. The findings and conclusions are limited to the specific project and properties described in this report, and by the accuracy and completeness of the information provided by others.

An ISA cannot entirely eliminate uncertainty regarding the potential for RECs. Conducting this assessment is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a project area within reasonable limits of time and cost. In conducting its services, Drake Haglan and Associates (DHA) used a degree of care and skill ordinarily exercised under similar circumstances by reputable members of its profession practicing in the same locality. No other warranty is made or intended. This ISA generally conforms to the level of documentation required in ASTM Practice E 1527-05.

SITE DESCRIPTION

Location and Description

The proposed project is located in the central eastern portion of El Dorado County (**Figure 1, Appendix A**) in the City of Placerville where Clay Street crosses Hangtown Creek, south of U.S Route 50 and includes the Clay Street Bridge, portions of Main Street, Cedar Ravine Road, Thompson Way, Pacific Street, Locust Avenue, and a section of the El Dorado Trail (**Figure 2, Appendix A**).

The City of Placerville is proposing to replace the existing Clay Street Bridge over Hangtown Creek and realign Clay Street to create a new 4-leg intersection with Main Street and Cedar Ravine Road. Currently, Clay Street intersects with Main Street approximately 120 ft west from the intersection of Main Street and Cedar Ravine Road. The existing bridge has been identified as Functionally Obsolete due to substandard deck width; therefore, the bridge is eligible for replacement under HBP guidelines. In addition to replacing the existing one-lane bridge, the City of Placerville proposes to realign Clay Street to tie into the Cedar Ravine Road/Main Street intersection, reconfigure the Ivy House parking lot, and improve the Locust Street parking lot. The new Clay Street/Cedar Ravine Road/Main Street intersection will be a 4-way stop with improvements for future signalization. The purpose of the proposed project is to remove the functionally obsolete existing concrete bridge and replace it with a new concrete bridge designed to current structural and geometric standards that will provide adequate, reliable, and safe service for traffic. The new bridge and realignment will maintain access and improve safety for vehicular, pedestrian, and bicycle traffic.

Demolition

Best management practices will be implemented during construction. Demolition of Clay Street Bridge, existing retaining walls, sidewalks, asphalt, etc. will be performed in accordance with City of Placerville standards supplemented by Caltrans Specifications modified to meet environmental permit requirements. All concrete and other debris resulting from the demolition will be removed from the project site and properly disposed of by the contractor.

Site and Vicinity Characteristics

Clay Street is classified as a local road and connects the City of Placerville to the residential area north of Hangtown Creek. The Clay Street Bridge is a single-lane bridge that crosses Hangtown Creek approximately 150 feet north of the Main Street/Clay Street intersection. Adjacent land use consists of the El Dorado Trail and medium- to high-density residential and commercial development.

United States Geological Survey topographic map of the Placerville 7½-minute quadrangle (1949 photorevised 1973) indicates the project area elevations increase to the east. The elevation along the project area is approximately 1,867 feet above mean sea level. The project area is located adjacent to a 500-year flood zone located along the southern Hangtown Creek boundary.

According to the United States Department of Agriculture (USDA) Soil Conservation Service Soil Survey Geographic Database (SSURGO), there are four soil types in the project area: Placer diggings, Mariposa very rocky silt loam; Mariposa gravelly silt loam; and Mariposa-Josephine very rocky loams. All four types of soils have been described as being well drained soil.

Although no significant occurrence of ultramafic rock where naturally occurring asbestos minerals (NOA) are likely to occur, as reported in the El Dorado County 2005 Map Asbestos Review Areas, Western

Slope, County of El Dorado, State of California, the entire project area is located within a buffer zone identifying the potential for naturally occurring asbestos (NOA) resulting from a north-south trending fault that crosses Bedford Avenue and Main Street in the western portion of the project area and NOA could potentially occur in the area.

Description of Structures, Road and Other Site Improvements

Based on a review of topographic maps and aerial photographs, Clay Street and the Clay Street Bridge have been in existence prior to 1935 and have remained in the same alignment since then. The project site is surrounded by commercial and residential development. Land use adjacent to Clay Street is predominantly commercial development with residential development to the north and south and the associated roadways, curbs, gutters and sidewalks for residential and commercial uses. The bridge currently carries vehicular, bicycle and pedestrian traffic on Clay Street over Hangtown Creek. There is currently no curb-side on street parking allowed on Clay Street or within the project limits of the bridge however there is a public parking lot on the east side of Clay Street.

Area Geology and Hydrogeology

The project site is located in the central part of the Sierra Nevada Range geomorphic province of California, which is a tilted fault block nearly 400 miles long. Its east face is a high, rugged multiple scarp, contrasting with the gentle western slope (about 2°) that disappears under sediments of the Great Valley. Deep river canyons are cut into the western slope where the upper courses, especially in massive granites of the higher Sierra, are modified by glacial sculpturing, forming such scenic features as Yosemite Valley. The metamorphic bedrock contains gold bearing veins in the northwest trending Mother Lode. The northern Sierra boundary is marked where bedrock disappears under the Cenozoic volcanic cover of the Cascade Range.

No water wells are present within one mile of the project site. Based on published environmental reports, the general water table fluctuates seasonally at depths of approximately 3 to 5 feet below ground surface beneath the project area with a general south/southwest gradient.

USER-PROVIDED INFORMATION

The City of Placerville proposes to remove the existing bridge and reconstruct a new bridge as well as realign Clay Street with Cedar Ravine Road at the Main Street intersection. The purpose of this project is to replace a functionally obsolete and hydraulically inadequate bridge with a bridge that is consistent with appropriate design standards for roadway geometry, accessibility, hydraulics, and structural integrity. In addition, the realigning of Clay Street is intended to help reduce congestion and improve traffic flow in the general area as well as address pedestrian and bicycle safety as it relates to the adjacent El Dorado Trail and Main Street circulation.

RECORD REVIEW

Environmental Records Review

A computerized environmental information database search was performed for the project site by EDR on October 6, 2009 (EDR, 2009). The project site has not changed significantly since 2009 so a new database search was not conducted. The databases searched included federal, state, local, and tribal databases as defined by ASTM E 1527-05, plus proprietary databases maintained by EDR. All available listings/databases were searched for sites located within a one-mile radius of the project site. The search radius distances are based on the minimum distances established by ASTM and commonly used for environmental site assessments. The EDR report is attached as **Appendix B**. Explanations of the federal and state listings/databases are provided in the portion of the EDR report entitled "Description of Databases Searched".

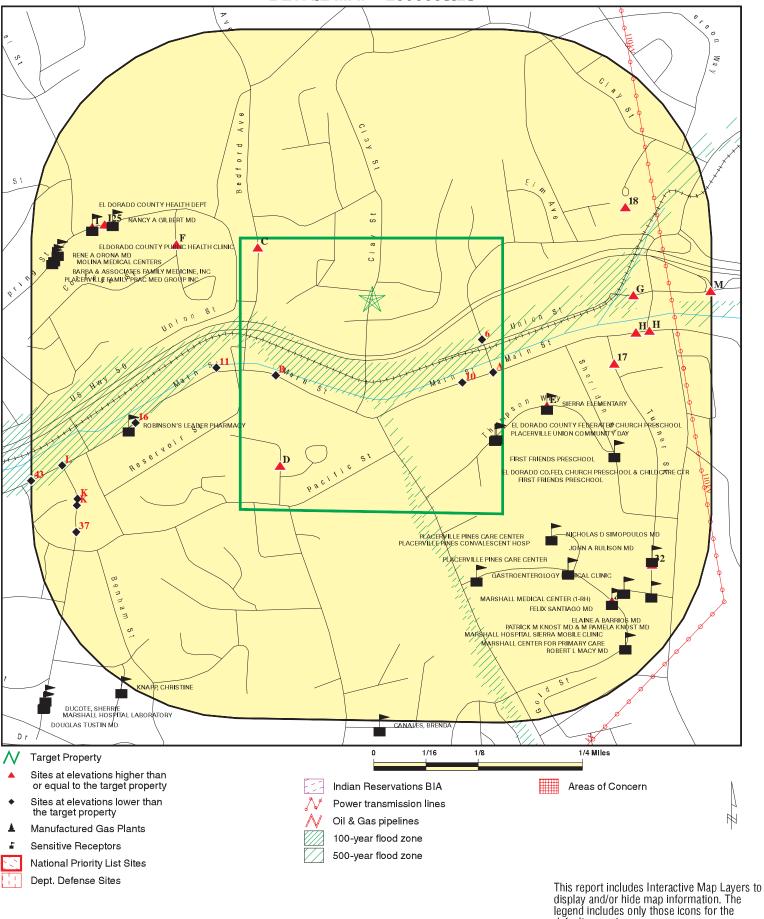

Due to the long history of this densely developed area, findings within ½ mile of the project site are considered to have potential impact. The primary databases with findings that may indicate potential impact to the construction of the proposed project are the Leaking Underground Storage Tank database (LUST), the Department of Toxic Substances Control's (DTSC's) Envirostor database, the Regional Water Quality Control Board (RWQCB) Spills, Leaks, and Investigation Cleanup cost recovery listing (SLIC), the Aboveground Storage Tank database (AST), the Underground Storage Tank database (UST), the Statewide Environmental Evaluation and Planning System (SWEEPS UST), the California Facility Inventory Database (CAD FID UST), the Historical UST Registered Database (HIST UST), the Small Quantity Generator (SQG) violation record, and the Hazardous Waste & Substance Sites listing (HIST CORTESE).

Findings in the County's Certified Unified Program Agency Database (CUPA), Hazardous Waste Transporters (HWT), Drycleaners, and EDR US Historic Auto, EDR US Historic Cleaners lists are not included in the summary report due to the low potential effects of the identified sites.

The database search returned ninety (90) records at thirty-four (34) locations. Twenty-eight (28) of the sites had records returned from two or more databases and some sites are listed more than once under different names. The project area was not listed on any of the databases reviewed by EDR. Of the thirty-four (34) identified sites, fourteen (14) are LUST sites with the regulatory status of Case Closed and are not considered a threat to the site; three (3) of the LUST sites are nearing closure with regulatory Verification Monitoring status and are not considered a threat to the site, and three (3) of the LUST sites have the regulatory Site Assessment status. Based on distance, facility violations, and facility activities that would pose an environmental risk to the site, none of the three (3) remaining LUST sites or the fourteen (14) remaining sites were found to pose a risk to the site.

DHA reviewed eleven (11) unmapped sites, also known as "orphan" sites. None of the sites were identified by a specific location and were therefore unable to be identified as to their specific location.

Summary of Record Review Findings

The following facilities were identified in the vicinity of the project area.

Main Street Court House – 495 Main Street

This site was not identified in the EDR database but located on the State Water Resources Control Board's Geotracker website through a September 29, 2009 Final Draft Limited Environmental Phase II Investigation prepared by Bureau Veritas North America, Inc. The site had a reported heating oil release on an unknown date from a former crude oil UST located in the northern portion of the parcel. According to a June 19, 2009 URS Final Draft Phase I Environmental Site Assessment prepared for the Downtown Superior Court located at Main Street Courthouse, 495 Main Street, Placerville, California, the Placerville Fire Department Fire Marshal recalls removal of a heating oil UST from the project area during the late 1990s or early 2000s; however, no records regarding removal, closure, or subsurface investigations relating to the UST were identified in agency or county court files.

Based on the impact to groundwater, the proximity to the site (approximately 100 feet west), and the shallow depth to groundwater, the former UST is not considered a recognized environmental condition (REC), since the site is cross-gradient to the project area.

Former Pacific Bell and Former Elections of El Dorado County – 525 Main Street

Currently, this is the El Dorado County District Attorney's offices. This site is identified on multiple EDR databases with a reported diesel release in 1991 from one 500-gallon UST, which impacted soil and a drinking water aquifer. As reported by the El Dorado County Environmental Health Department (EDCEHD), the tank was removed in September 1991 and 22-tons of soil were excavated from the tank pit. This site attained *No Further Action* in June 2000 from the Central Valley Regional Water Quality Control Board (CVRWQCB); no groundwater investigation is recorded. Based on the reported impact to shallow groundwater and the adjacent proximity to the site, this site is not considered a REC and not anticipated to be a source likely to affect the project area.

Mooney Parking Lot - 588 Main Street

Currently this is the Mooney Parking Lot, a City of Placerville parking lot; however, as identified from the City of Placerville Assessor records and the 1943 and 1950 Sanborn® Maps, this property was a former gasoline Union Oil service station and garage. As reported by Robert (Bud) Shinkle with the City of Placerville, the City removed two (2) 500-gallon USTs from the northeastern portion of the property and one (1) 10,000-gallon UST from the north-central portion of the property. In an April 27, 1988 project area Investigation letter from the City, the site was designated as *non-contaminated*. Therefore, this site is not considered a REC and is not anticipated to be a source likely to affect the project area.

<u>Ivy House Parking Lot – 595 Main Street</u>

Currently this is a City of Placerville parking lot; however as identified on the Sanborn® Map, this property was a former Union service station. The disposition of the gasoline USTs is unknown. However, during March 11, 2009 trenching activities, hydrocarbon odors were detected in a 6-foot deep trench excavated in the south-central portion of the parking lot near where the former Union gas station was located. As reported by Peter Mickel with the CVRWQCB, this address is not listed in historical records or

on the CVRWQCB's Geotracker website. The City Building Department and the EDCEHD report that no records exist for the address.

Based on the distance relative to the project area, the up-gradient location, and the shallow depth to groundwater, the former gasoline service station is considered an REC and anticipated to be a source of contamination likely to affect the project area

Historical Use Information

The objective of reviewing historical use information is to develop a history of previous land uses in the vicinity of the project area and to assess these uses for potential hazardous materials impacts that may affect the project. Historical sources that were readily available, reviewable, and likely to provide useful information, given the time and cost constraints inherent in ISA projects, were reviewed as far back as 1891. Based on the aerial photography, land use in the vicinity of the project area consisted of residences mixed with areas of agricultural land prior to 1935. However, land use in the project vicinity rapidly became urbanized over the following decades. Current land use in the project vicinity consists of commercial, and residential.

Historical Topographic Maps

Historical topographic maps of the project area were requested from EDR. Four maps for the project site were available from the United State Geological Survey (USGS) for the years 1893, 1949, 1950, and 1973. These maps depicted the Clay Street alignment and surrounding elements. According to these maps, prior to 1893 there was no development depicted in the vicinity of the current project site, however Clay Street is visible. In 1949, Broadway was the primary road through Placerville and Clay Street is shown north of Cedar Ravine. There was significant development visible in Placerville but lesser amounts around the project area. The 1950 and 1973 maps show no significant change from 1949.

Fire Insurance Maps

Fire insurance maps are produced by private fire insurance companies to indicate uses of the project area on specified dates. Fire insurance maps were requested from EDR, the copyright holder for the Sanborn map collection. EDR provided maps for the years 1891, 1895, 1899, 1910, 1940, and 1953.

In the 1891, 1895, 1899, and 1910 maps, the Clay Street Bridge, Clay Street, Main Street, Cedar Ravine Road, Hangtown Creek and the Ivy House are all identified on the map. Surrounding properties include a grammar and high school, and carpenter shop along Clay Street, a Methodist Church and Blair's Lumber Yard along Cedar Ravine Road, and various manufacturing and commercial businesses along Main Street including Blair's Mill. In the 1895 map, a platform extends from the Ivy House across Main Street to Cedar Ravine Road. The map did not state whether this platform was raised. Street numbers start at the number "1" in the western-most portion of Main Street and increase eastward along Main Street. In the 1910 map, a rectangular structure is located on the northern portion of the Ivy House parcel with dashed lines leading into the hotel at the north and into an area labeled Heat, Lights, and Elect. This could indicate a generator and fuel tank or a heating oil unit and associated fuel tank.

In the 1940 and 1953 Sanborn maps, much of the area has remained the same, except for the absence of the Blair's Mill, the grammar and high schools, and the platform. The Methodist Church has been renamed to the El Dorado County Federated Church, Blair's Lumber Yard has been renamed to the Diamond Match Lumber Company, and the Ivy House has been renamed the Ivy Hotel. East and on the same parcel as the Ivy House, a Union service station is present. Double-digit Main Street numbers have

been replaced by triple-digit numbers. The Ivy House gas station is located at 595 Main Street. A second Union Service station and garage is located at 588 Main Street. Commercial and residential structures are visible along both sides of Main Street including Pacific Gas & Electric, and a Milk Depot along the south side of Main Street and a Soda Works and Sheet Metal Works along the north side. Bedford Street is located west and terminates into Main Street. West across Bedford is the Courthouse with a crude oil underground storage tank (UST) located in the northern portion of the parcel. In the 1953 map, an additional gas station is visible at 548 Main Street.

Historical Aerial Photographs

Historical aerial photographs are valuable for the environmental assessor to review features of properties along the project corridor over a long period of time. Nine historical aerial photographs were reviewed from EDR. Historical aerial photographs were reviewed from 2005 back to 1935, with the longest gap in coverage being 11 years (between 1935 and 1946, 1962 and 1973, and 1973 and 1984). Each photograph showed Clay Street in its current alignment.

In the 1935 aerial photograph, the project area and surrounding area consists of residences mixed with areas of agricultural land north of the future US Highway 50. Main Street, Clay Street, Cedar Ravine, and the Clay Street Bridge are visible. The Ivy House is visible within the parcel located at the northeast corner of the Clay Street and Main Street intersection.

In the 1946 aerial photograph, very little agriculture land use is visible with open land and residences dominating the landscape. Due to the scale and poor quality of the aerial photograph, little detail is visible. In the 1952 aerial photograph, light industrial dominates the area south of Main Street with residential north and south of Main Street and agricultural land use to the southeast. The Ivy House is visible within the parcel located at the northeast corner of the Clay Street and Main Street intersection. East and adjacent to the Ivy House, two small adjoining structures are visible consistent with a gasoline service station. These structures are further defined in the preceding Sanborn® Maps section.

In the 1962 aerial photograph, the four-lane Highway 50 is visible north of Main Street. Increased residential development is visible north and south of Main Street with increased commercial development immediately along Main Street. Clay Street extends farther north from the intersection with Main Street. The Ivy House remains but the gasoline service station identified in the 1952 aerial photograph is not visible in the 1962 aerial. In the 1973 and 1984 aerial photographs, increased overall development is visible north and south of the project site along Main Street. The Ivy House has been removed and the Clay Street bridge is visible. In the 1993, 1998, and 2005 aerial photographs, other than increased overall development north and south of the project site along Main Street, little change is visible in this series of aerial photographs.

Environmental Liens and Additional Information

No information regarding the chain-of-title ownership history or environmental liens recorded against the project site was provided by the user. Environmental lien searches were not conducted as part of the scope of work for this project.

SITE RECONNAISSANCE

Reconnaissance of the project site was performed on August 27, 2007 and October 7, 2009 by Taber Consultants and on December 4, 2015 by DHA. Each time, the reconnaissance consisted of a walking and driving along Main Street, Clay Street, Cedar Ravine Road, and side streets surrounding the project site to make visual observations for evidence of current land uses, past uses, or existing conditions that indicate the presence or likely presence of hazardous substances or petroleum products on the project site or adjacent properties under conditions that could significantly affect the feasibility or cost of the proposed project.

The area northwest and northeast of the project site is occupied by the Caltrans right-of-way for the existing Clay Street alignment. Land north of the project site across Hangtown Creek and beyond the U.S. Highway 50 overcrossing is residential development, while the remaining southern portion of the project site is comprised of small businesses with residential development beyond. General reconnaissance observations, observations of specific items of potential concern, and results of discussion with the El Dorado County Assessor's Office (EDCAO), and the EDCEHD are discussed below. An Initial Site Assessment Checklist was prepared during the reconnaissance survey and is attached in **Appendix C**.

Known Current and Past Uses of the Site and Adjoining Properties

According to the review of historical sources, development in the project vicinity predates 1891. Clay Street is a two-lane, asphalt-paved cross-street off Main Street. The potential for aerially deposited lead (ADL) from vehicle exhaust resulting in elevated lead concentrations in soil adjacent to the project area is considered low based on the rural nature of this road, and likely lower traffic volumes during the time leaded gasoline was in use. The existing bridge crossing Hangtown Creek consists of a concrete structure and associated abutments. Foundation type and level are not known but spread footings seem likely. Existing deck elevation is at an approximate elevation of 1,867 feet above mean sea level.

Utilities and PCBs

Utility piping attached to the bridge, a large water supply line, and above ground and underground public and private utilities are located within the project site. The existing utility infrastructure within the project area would be relocated to accommodate the new Clay Street road alignment, and the widened bridge over Hangtown Creek. In addition, the project will realign an existing sewer line under the Ivy House Parking Lot and reconnect the line to an existing sewer line on the south side of Hangtown Creek. No large power substations or step-down transformers, which are known to contain PCBs, were noted within the project area. No spills or hazardous materials response events related to transformers were noted in the EDR report.

DATA GAP ANALYSIS

The ASTM E 1527-05 standard requires a listing of "data gaps" encountered during the investigative process that may affect the validity of the conclusions drawn by the environmental professional. The ASTM E 1527-05 standard also requires that the environmental professional estimate the relative importance of the data gaps. Generally, gaps in available data are related to the availability of historical data sources for specific sites of concern. The environmental professional uses multiple historical data sources as a method to provide coverage for data gaps. Historical information is collected on a recurring basis, and the passage of time between data sets may or may not constitute a significant gap in data coverage. For this project, the following items may constitute a data gap as defined by ASTM:

- Absence of aerial photography prior to 1935
- Absence of aerial photography between 1935 and 1946, 1962 and 1973, and 1973 and 1984.
- Absence of topographic maps between 1893 and 1949, 1950 and 1973, and beyond 1973.

The lack of aerial photography prior to 1937 and the multiple 11-year gaps, and the lack of topographic maps do not appear to present significant data gaps because of the presence of other supporting historical information in the area.

FINDINGS AND CONCLUSIONS

The ISA was performed in general conformance with the scope and limitations of ASTM Practice E 1527-05. Any exceptions to, or deletions from, this practice are described previously in this report. No RECs, as defined in ASTM Practice E 1527-05, were observed during a site visit or discovered during the EDR record search in connection with the project site. Avoidance, minimization, and/or mitigation measures are proposed as part of the project as described in "Recommendations".

Asbestos

New uses of asbestos containing materials (ACM) were banned by the EPA in 1989. Revisions to regulations issued by the Occupational Safety & Health Administration (OSHA) on June 30, 1995, require that all thermal systems insulation, surfacing materials, and resilient flooring materials installed prior to 1981 be considered Presumed Asbestos Containing Materials (PAC) and treated accordingly. In order to rebut the designation as PAC, OSHA requires that these materials be surveyed, sampled, and assessed in accordance with 40 CFR 763 (Asbestos Hazard Emergency Response Act [AHERA]). ACM have also been documented in the rail shim sheet packing, bearing pads, support piers, and expansion joint material of bridges.

The Caltrans Historic Bridge Inventory indicates that the Clay Street Bridge over Hangtown Creek was built in 1940; and due to the age and structure type, there is the potential to encounter ACMs during demolition of the existing bridge structure and should be addressed under separate assessment during the Plan, Specifications and Estimate (PS&E) process.

Naturally Occurring Asbestos

Earthen material containing NOA equal to or greater than one percent is considered a hazardous waste (CARB 2006). During construction, any existing hazardous soils that may be encountered would pose a hazard for construction workers and the environment. Construction workers typically are at the greatest risk for exposure to contaminated soil. Accidents or spills during transport of hazardous materials or wastes could have the potential to expose the public and the environment to these substances. To minimize the release of asbestos fibers during activities involving the handling of asbestos, the following regulations shall be followed during construction.

US EPA established National Emissions Standards for Hazardous Air Pollutants (NESHAP) to protect the public. Asbestos was one of the first hazardous air pollutants regulated. The asbestos NESHAP regulations protect the public by minimizing the release of asbestos fibers during activities involving the processing, handling, and disposal of asbestos-containing material. This is important because asbestos can be found in building products that may be encountered during structure demolition or retrofit and because NOA exists in many areas of California.

Implementation of the following engineering and work practices that may reduce exposure to NOA during excavation, grading, or utility work is recommended by the EPA (USEPA, 2008):

- Wet road surfaces with water using trucks, hoses, or sprinklers
- Wet piles of excavated material and cover them with tarps, plastic sheeting, or other items
- Continuously mist the work area
- Install wind barriers around the work area
- Clean or decontaminate equipment and vehicles to ensure that no equipment or workers track soil out of the work area (a gravel pad, tire shaker, or wheel wash system may be used to clear soil from vehicles)
- Wet the work area using a spray system attached directly to rock cutting or drilling equipment, such as a fine-mist sprayer or a variable-rate fogger nozzle (similar to those used in fire fighting)
- Excavate utility trenches to an adequate depth and backfill them with clean soil so that future repair work will not need excavation into potential NOA containing materials
- When transporting NOA containing materials, avoid overloading trucks; keep the material below the top of each truck compartment and cover material with a tarp
- Limit personnel and vehicle access to the work area
- Identify NOA containing areas with signs
- Reduce driving speed
- Reduce drilling or excavating speeds
- Excavate during periods of calm for low winds

The El Dorado County Air Quality Management District (District) regulates Naturally Occurring Asbestos. However, the District has not been delegated the authority to regulate demolition or renovation of facilities that may contain asbestos containing building materials, rather the California Air Resources Board (CARB) regulates facility demolition and renovation. El Dorado County Air Quality Management rule 223-2 requires activities to reduce asbestos dust created from earth moving activities and include the following measures:

• An Asbestos Dust mitigation plan must be prepared, submitted, approved and implemented when more than 20 cubic yards of earth will be moved.

- Visible emissions shall not exceed the shade designated as No. 0 on the Ringelmann Chart, or 0% opacity as determined in accordance with US EPA Method 9, at 25 feet from the point-of-origin and at the property line.
- Vehicle Speed Limitations and Posting of Speed Limit Signs
 - An owner/operator shall limit the speed of vehicles traveling within construction sites to a maximum of 15 miles per hour.
 - An owner/operator shall post speed limit signs limiting vehicle speed to maximum of 15 miles per hour that meet State and Federal Department of Transportation standards at each construction site's uncontrolled unpaved access/haul road entrance.
- When sustained wind speeds result in visible dust emissions in excess of the standards in Section 223- 2.4 A., despite the application of dust mitigation measures, grading and earthmoving operations except for dust mitigation activities shall be suspended
- Warning Signs shall be posted at the main entrance(s) to the project for the duration of soil
 disturbance activities. Signs shall be posted in letter of sufficient size as to be readily visible and
 legible. The following wording is recommended: "Warning. Soils in the area may contain
 naturally occurring asbestos. Asbestos is a known carcinogen. Report excessive fugitive dust to
 the contractor at (contractor phone number), NOA Hotline: 888-FYI4NOA or EDCAQMD: 530621-6662"
- Following operations and activities are expressly prohibited:
 - Rock crushing of asbestos-containing material;
 - Use of blower devices for any removal of asbestos-containing material.
- Owners/operators shall prevent carryout and trackout, or remove all visible carryout and trackout immediately.
- Cleanup of carryout and trackout shall be accomplished by:
 - Wet sweeping and picking-up; or
 - o Operating a HEPA filter equipped vacuum device; or
 - Flushing with water, if curbs or gutters are not present, and where the use of water will
 not result in a source of trackout material or result in adverse impacts on storm water
 drainage systems or violate any National Pollutant Discharge Elimination System permit
 program.
- An owner/operator of any site with 150 or more vehicle trips per day, or 20 or more vehicle trips per day by vehicles with three or more axles shall in addition to the requirements in Section 223-2.6.A, take the following preventative actions for carryout and trackout:
 - Installing and maintaining a trackout control device (grizzlies, gravel pads or paved surfaces) designed and maintained to control trackout at all access points to paved public roads; or:
 - Utilizing a carryout and trackout prevention procedure which has been demonstrated to the satisfaction of the Air Pollution Control Officer as achieving an equivalent or greater level of control.

As mentioned above, CARB regulates facility demolition and renovation and has adopted Airborne Toxic Control Measures (ATCMs) for NOA. These ATCMs shall be implemented prior to the start of construction in the project area in order to protect workers from NOA exposure (CARB, 2008).

1. Areas of One Acre or Less: No person shall engage in any construction or grading operation on property where the area to be disturbed is one (1.0) acre or less unless all of the following dust

mitigation measures are initiated at the start and maintained throughout the duration of the construction or grading activity:

- Construction vehicle speed at the work site must be limited to fifteen (15) miles per hour or less;
- Prior to any ground disturbance, sufficient water must be applied to the area to be disturbed to prevent visible emissions from crossing the property line;
- Areas to be graded or excavated must be kept adequately wetted to prevent visible emissions from crossing the property line;
- Storage piles must be kept adequately wetted, treated with a chemical dust suppressant, or covered when material is not being added to or removed from the pile;
- Equipment must be washed down before moving from the property onto a paved public road; and
- Visible track-out on the paved public road must be cleaned using wet sweeping or a HEPA filter equipped vacuum device within twenty-four (24) hours.
- 2. If NOA, serpentine, or ultramafic rock is discovered by the owner / operator, a registered geologist, or the Air Pollution Control Officer (APCO) in the area to be disturbed after the start of any construction, grading, quarrying, or surface mining operation: No person shall engage in any construction or grading operation unless the following requirements are met:
 - The owner / operator notifies the district of the discovery of naturally-occurring asbestos, serpentine, or ultramafic rock no later than the next business day;
 - The dust mitigation measures in (1) above are implemented within twenty-four (24) hours after determining that the property meets the described criteria; and
 - For operations in which the area to be disturbed is **one (1.0)** acre or less, the dust mitigation measures in subsection (e)(1) are maintained throughout the duration of the construction or grading activity.

Lead-Based Paint

Lead has been used in commercial, residential, roadway, and ceramic paint; in electric batteries and other devises; as a gasoline additive; for weighting; in gunshot; and other purposes. It is recognized as toxic to human health and the environment and is widely regulated in the United States. Structures constructed prior to 1978 are presumed to contain lead-based paint (LBP) unless proven otherwise, although buildings constructed after 1978 may also contain lead-based paints. Due to the construction age of the existing structure, painted areas on the existing bridge structure may also be of concern due to the possible use of lead-based paint. Additionally, pavement striping and thermoplastic paint used on roadways often contain lead. The potential exists for the bridge and associated features to contain LBP, and they should be addressed under separate assessment during the Plan, Specifications and Estimate (PS&E) process.

Petroleum Hydrocarbons

Evidence of hazardous substances and/or petroleum products on and adjacent to the project area was identified during this investigation, former gasoline service stations, and a heating oil UST (**Figure 3**). Based on file reviews, site reconnaissance, and the results of the ISA completed by Taber Consultants in 2009, which included discussions with regulatory personnel, the potential for the proposed construction to encounter hazardous materials within the project corridor is generally moderate, and they should be

addressed under separate assessment during the Plan, Specifications and Estimate (PS&E) process, since the project will not require the acquisition of right-of-way from any adjacent properties.

RECOMMENDATIONS

Health and Safety Plans

Health and safety considerations for construction workers and the general public must be taken into account during development of a Health and Safety Plan (HASP) for the project. The HASP should describe appropriate procedures to follow in the event that any contaminated soil or groundwater is encountered during construction activities. Any unknown substances should be tested, handled and disposed of in accordance with appropriate federal, state and local regulations.

QUALIFICATION OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in Section 312.10 of 42 Code of Federal Regulations [C.F.R.] Part 312. This ISA was conducted under the supervision of a qualified environmental professional. The preceding report has been prepared in general conformance with standard industry practice for performance of Environmental Site Assessments and includes the applicable portions of the investigation procedures codified in ASTM E 1527-05, Standard Practice for Environmental Site Assessments: Environmental Site Assessment Process. The end user of this report may rely on the contents, findings, and conclusions to be accurate within the limitations stated in this report and in the ASTM standard. The report also complies with specific requirements supplied by the client.

Qualified Environmental Professional Jennifer Hildebrandt, M.S. Environmental Coordinator

Qualifications of Environmental Professional

This ISA was performed by Jennifer Hildebrandt, DHA's qualified environmental professional, as defined by ASTM Practice E 1527-05, has over 5 years of experience in the assessment of impacted properties and compliance with environmental regulations. She has a Masters of Science Degree in Environmental Management from the University of San Francisco.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in bold italics are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 11/12/2008 has revealed that there are 7 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 08/27/2009 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 07/07/2009 has revealed that there are 3 UST sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

CA FID UST: The Facility Inventory Database contains active and inactive underground storage tank locations. The source is the State Water Resource Control Board.

A review of the CA FID UST list, as provided by EDR, and dated 10/31/1994 has revealed that there are 10 CA FID UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 11/12/2008 has revealed that there is 1 RCRA-NonGen site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Notify 65: Notify 65 records contain facility notifications about any release that could impact drinking water and thereby expose the public to a potential health risk. The data come from the State Water Resources Control Board's Proposition 65 database.

A review of the Notify 65 list, as provided by EDR, and dated 10/21/1993 has revealed that there is 1 Notify 65 site within approximately 1 mile of the target property.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D006
Waste name: CADMIUM

Waste code: D008 Waste name: LEAD

Waste code: D039

Waste name: TETRACHLOROETHYLENE

Violation Status: No violations found

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal

facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Transporters, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

USGS TOPOGRAPHIC MAP

Target Property Map: 38120-F7 PLACERVILLE, CA

Most Recent Revision: 1973

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

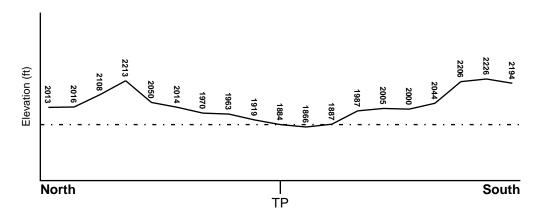

TOPOGRAPHIC INFORMATION

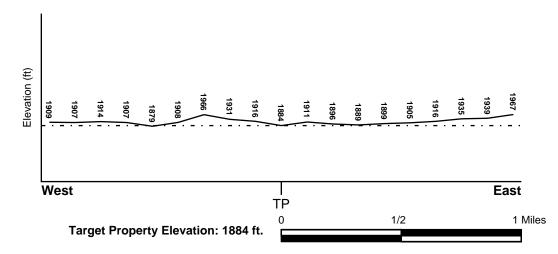

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

 MAP ID
 FROM TP
 GROUNDWATER FLOW

 Not Reported
 FROM TP
 TO GROUNDWATER FLOW

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: MARIPOSA

Soil Surface Texture: gravelly silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward

movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 60 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Bou	ındary		Classification		Saturated hydraulic	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		Soil Reaction (pH)
1	0 inches	7 inches	gravelly silt loam	Not reported	Not reported	Max: Min:	Max: Min:
2	7 inches	25 inches	gravelly silt loam	Not reported	Not reported	Max: Min:	Max: Min:
3	25 inches	29 inches	unweathered bedrock	Not reported	Not reported	Max: Min:	Max: Min:

Soil Map ID: 2

Soil Component Name: PLACER DIGGINGS

Soil Surface Texture: fine sandy loam, cobbles

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to

excessively drained sands and gravels.

Soil Drainage Class:

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map. USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database Source: Department of Health Services

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations Source: Department of Conservation

Telephone: 916-323-1779

Oil and Gas well locations in the state.

RADON

State Database: CA Radon

Source: Department of Health Services

Telephone: 916-324-2208 Radon Database for California

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency

(USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at

private sources such as universities and research institutions.

EPA Radon Zones Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor

radon levels.
